Good housing. Easy transit. Food access. Green spaces. Gathering places. Everybody wants to live in a healthy neighborhood. Bridging the gap between research and practice, it maps out ways for cities and towns to help their residents thrive in places designed for living well, approaching health from every side – physical mental, and social.

The only book that shows how to transform existing suburbs to create environment- and people-friendly neighborhoods...

This book by architect and author Chapin describes existing pocket neighborhoods and co-housing communities--and provides inspiration for creating new ones.

Civil rights leader John Perkins and CCDA president Wayne Gordon revisit the founding principles of the Christian Community Development Association, seeking to provide the terms for a new discussion around the emerging priorities of Christian community development today. Includes profiles of thriving urban ministries.

Cities can be seen as geographical imaginaries: places have meanings attributed so that they are perceived, represented and interpreted in a particular way. We may therefore speak of cityness rather than 'the city': the city is always in the making. It cannot be grasped as a fixed structure in which people find their lives, and is never stable, through agents

designing courses of interactions with geographical imaginations. This theoretical perspective on cities is currently reshaping the field of urban studies, requiring new forms of theory, comparisons and methods. Meanwhile, mainstream urban studies approaches neighbourhoods as fixed social-spatial units, producing effects on groups of residents. Yet they have not convincingly shown empirically that the neighbourhood is an entity generating effects, rather than being the statistical aggregate where effects can be measured. This book challenges this common understanding, and argues for an approach that sees neighbourhood effects as the outcome of processes of marginalisation and exclusion that find spatial expressions in the city elsewhere. It does so through a comparative study of an unusual kind: Sub-Saharan Africans, second generation Turkish and Lebanese girls, and alcohol and drug consumers, some of them homeless, arguably some of the most disadvantaged categories in the German capital, Berlin, in inner city neighbourhoods, and middle class families in owner-occupied housing. This book analyses urban inequalities through the lens of the city in the making, where neighbourhood comes to play a role, at some times, in some practices, and at some moments, but is not the point of departure.

Traditionally, children have been considered from a primarily developmental perspective, in need of education in order to achieve autonomy, growth, and eventually adulthood. Childhood studies have recently underlined an alternate way to look at children, starting from the consideration that children are competent social actors and can actively participate in social life. However, there has been relatively little attention paid to the ways in which adults can actively empower children's agency and participation. This book aims to highlight this important aspect, explaining the position of adults as facilitators and mediators in the process of constructing childhood.

This volume offers comprehensive analyses of how we live continuously in a multiplicity and simultaneity of 'places'. It explores what it means to be in place, the variety of ways in which meanings of place are made and how relationships to others are mediated through the linguistic and material semiotics of place. Drawing on examples of linguistic landscapes (LL) over the world, such as gentrified landscapes in Johannesburg and Brunswick, Mozambican memorializations, volatile train graffiti in Stockholm, Brazilian protest marches, Guadeloupian Creole signs, microscapes of souvenirs in Guinea-Bissau and old landscapes of apartheid in South Africa in contemporary time, this book explores how we are what we are through how we are emplaced. Across these examples, world-leading contributors explore how LLs contribute to the (re)imagining of different selves in the living past (living the past in the present), alternative presents and imagined futures. It focuses particularly on how the LL in all of these mediations is read through emotionality and affect, creating senses of belonging, precarity and hope across a simultaneous multiplicity of worlds. The volume offers a reframing of linguistics landscape research in a geohumanities framework emphasizing negotiations of self in place in LL studies, building upon a rich body of LL research. With over 40 illustrations, it covers various methodological and epistemological issues, such as the need for extended temporal engagement with landscapes, a mobile approach to landscapes and how bodies engage with texts.

Read Book Creating Neighbourhoods And Places In The Built Environment Chapman David

In Western societies, such as the Netherlands, people with different ethnic backgrounds live together in urban areas. This book examines daily life in multi-ethnic neighbourhoods and the meaning of public spaces for social integration. Through observations and interviews in two Dutch cities (Nijmegen and Utrecht) insight is gained into the use and perception of public spaces. Positive experiences in public spaces contribute to feeling at home in a multi-ethnic neighbourhood. Not only intense and lasting contacts, but also fleeting interactions contribute to feeling at home. Experience with diversity contributes to a realistic view of multiculturalism, a view that is based on everyday experiences, with all its positive and negative implications. This, however, does not mean that residents do not use stereotypes or categorizations. However, there is a major difference between the public discourse - which focuses on differences and problems - and everyday encounters, which are perceived as a way to experience and enjoy diversity. Recommendations are that politicians should look at the everyday realities in multi-ethnic neighbourhoods when discussing issues related to multi-ethnic societies. Repeatedly stressing the dichotomy between native and non-native Dutch citizens and focusing on problems, has a negative effect on the everyday lives of people because it produces and reproduces stereotyped images. Integration is not only about non-native Dutch residents adapting themselves to Dutch society: it is also about the extent to which people from various backgrounds live together and feel at home in their neighbourhood.
