The Development of an Extraordinary Species We human beings share 98 percent of our genes with chimpanzees. Yet humans are the dominant species on the planet -- having founded civilizations and religions, developed intricate and diverse forms of communication, learned science, built cities, and created breathtaking works of art -- while chimps remain animals concerned primarily with the basic necessities of survival. What is it about that two percent difference in DNA that has created such a divergence between evolutionary cousins? In this fascinating, provocative, passionate, funny, endlessly entertaining work, renowned Pulitzer Prize-winning author and scientist Jared Diamond explores how the extraordinary human animal, in a remarkably short time, developed the capacity to rule the world . . . and the means to irrevocably destroy it.

Who's that swinging through the trees? Learn all about chimpanzees and their incredible rain forest habitat. Full-color photographs give readers a glimpse into the life of a chimp while critical thinking questions and a photo glossary assist first-time nonfiction readers.

Your inner Chimp can be your best friend or your worst enemy...this is the Chimp Paradox Do you sabotage your own happiness and success? Are you struggling to make sense of yourself? Do your emotions sometimes dictate your life? Dr. Steve Peters explains that we all have a being within our minds that can wreak havoc on every aspect of our lives—be it business or personal. He calls this being "the chimp," and it can work either for you or against you. The challenge comes when we try to tame the chimp, and persuade it to do our bidding. The Chimp Paradox contains an incredibly powerful mind management model that can help you be happier and healthier, increase your confidence, and become a more successful person. This book will help you to: —Recognize how your mind is working —Understand and manage your emotions and thoughts —Manage yourself and become the person you would like to be Dr. Peters explains the struggle that takes place within your mind and then shows you how to apply this understanding. Once you're armed with this new knowledge, you will be able to utilize your chimp for good, rather than letting your chimp run rampant with its own agenda.

The first edition of Frans de Waal's Chimpanzee Politics was acclaimed not only by primatologists for its scientific achievement but also by a much broader audience of politicians, business leaders, and social psychologists for its remarkable insights into very basic human needs and behaviors. In this revised edition—featuring a new gallery of color photographs along with a new introduction and epilogue—de Waal expands and updates his story of the Arnhem colony and its continuing political upheavals. We learn the fate of many memorable chimpanzees and meet the colony's current leaders and their allies. The new edition remains a detailed and thoroughly engrossing account—of sexual rivalries and coalitions, of actions governed by intelligence rather than instinct—and it reaffirms the complex bond between humans and their closest living relatives. As we watch the chimpanzees of Arnhem behave in ways we recognize from Machiavelli (and from the nightly news), de Waal reminds us again that the roots of politics are older than humanity.

En esta obra fascinante, provocadora, apasionada y divertida, Jared Diamond, divulgador y científico de primera línea mundial, investiga cómo el ser humano ha llegado hasta donde lo ha hecho y qué implicaciones tiene para el futuro. El ser humano comparte el 98 por ciento de su código genético con el chimpancé. Sin embargo, los humanos son la especie dominante en el planeta, han fundado civilizaciones y religiones, han desarrollado maneras de comunicarse complejas y diversas, han descubierto la ciencia, han construido ciudades y han creado asombrosas obras de arte; mientras que los chimpancés siguen siendo animales preocupados principalmente por las necesidades básicas de la supervivencia. ¿Qué tiene ese dos por ciento de diferencia genética que ha supuesto semejante divergencia entre especies tan emparentadas evolutivamente? Escrita con su característico estilo multidisciplinar, la obra de Diamond, premio Pulitzer por Armas, gérmenes y acero, reúne conocimientos de biología molecular, genética, paleontología, antropología y etología. Con todo ello construye un maravilloso retrato de lo que nos hace humanos, y del extraordinario significado que eso encierra. Reseña: «Está escrito con gran ingenio y es un placer leerlo.» New York Times Book Review

Why the education system is failing our kids and how we can start the revolution that will save our schools With their emphasis on regurgitated knowledge and stressful exams, today's schools actually do more harm than good. Guiding readers past the sterile debates about City Academies and dumbed-down exams, Claxton proves that education's key responsibility should be to create enthusiastic learners who will go on to thrive as adults in a swiftly-changing, dynamic world. Students must be encouraged to sharpen their wits, ask questions, and think for themselves - all without chucking out Shakespeare or the Periodic Table. Blending down-to-earth examples with the latest advances in brain science, and written with passion, wit, and authority, this brilliant book will inspire teachers, parents, and readers of all backgrounds to join a practical revolution and foster in the next generation a natural curiosity and the spirit of adventure.

Visit the author's Web site at www.ourinnerape.com It's no secret that humans and apes share a host of traits, from the tribal communities we form to our irrepressible curiosity. We have a common ancestor, scientists tell us, so it's natural that we act alike. But not all of these parallels are so appealing: the chimpanzee, for example, can be as vicious and manipulative as any human. Yet there's more to our shared primate heritage than just our violent streak. In *Our Inner Ape*, Frans de Waal, one of the world's great primatologists and a renowned expert on social behavior in apes, presents the

provocative idea that our noblest qualities—generosity, kindness, altruism—are as much a part of our nature as are our baser instincts. After all, we share them with another primate: the lesser-known bonobo. As genetically similar to man as the chimpanzee, the bonobo has a temperament and a lifestyle vastly different from those of its genetic cousin. Where chimps are aggressive, territorial, and hierarchical, bonobos are gentle, loving, and erotic (sex for bonobos is as much about pleasure and social bonding as it is about reproduction). While the parallels between chimp brutality and human brutality are easy to see, de Waal suggests that the conciliatory bonobo is just as legitimate a model to study when we explore our primate heritage. He even connects humanity's desire for fairness and its morality with primate behavior, offering a view of society that contrasts markedly with the caricature people have of Darwinian evolution. It's plain that our finest qualities run deeper in our DNA than experts have previously thought. Frans de Waal has spent the last two decades studying our closest primate relations, and his observations of each species in *Our Inner Ape* encompass the spectrum of human behavior. This is an audacious book, an engrossing discourse that proposes thought-provoking and sometimes shocking connections among chimps, bonobos, and those most paradoxical of apes, human beings.

A New York Times Bestselling Author Mama, a chimpanzee matriarch, formed a deep bond with biologist Jan van Hooff. When she was dying, van Hooff visited her in her night cage for a last hug. The film of their goodbyes went viral. Millions were deeply moved by the way Mama embraced the professor, welcoming him with a big smile while reassuring him by patting his neck -- a gesture often considered typically human yet is common to all primates. This story and others like it form the core of Frans de Waal's argument that humans are not alone in their capacity for love, hate, fear, shame, guilt, joy, disgust, and empathy.
