Vietnamese leisure airline, Bamboo Airways, will reportedly sign a deal with General Electric (GE) worth \$2 billion to acquire new GENx engines. The new engines bound to power the airline's fleet of ...

Bamboo Airways to sign GE jet engine deal worth \$2B

Fumoto USA's MH-10 hose connector is designed to connect a hose to any of the company's 3/8' short nipple engine oil drain valves.

from them when time for school or work. It has illustrative pictures and content for the parent and child to interact before they go about their day.

This handbook for German/English/German technical translators at all levels from student to professional covers the root terminologies of the spectrum of scientific and engineering fields. The work is designed to give technical translators direct insight into the main error sources occurring in their profession, especially those resulting from a poor understanding of the subject matter and the usage of particular terms to designate different concepts in different branches of technology. The style is easy to read and suitable for nonnative English speakers and translators with no engineering experience. Volume 1 presents a comprehensive systematic description of the basic concepts underlying all branches of technology: Electrical, Mechanical and Chemical Engineering, Materials, Science, Electronics, Nucleonics, Aeronautics, Computers, Automobiles, Plastics and other important fields. Volume 2 expands this terminology with the aid of a Technical Thesaurus and a set of structured bilingual dictionaries which draw attention to specific English/German errors, usage of technical vocabulary and to collocations of general vocabulary in engineering contexts. The two volumes combine 3 major areas: 1. Technical Translation, 2. General Linguistics and 3. Computational Lexicography, possibly indirectly marking the birth of a new discipline "Technical Linguistics". The book is designed for practical as well as academic use, for translator trainers, practicing translators, applied linguists, and professional engineers and scientists working with English/German documentation. "There is so much material there that the books will not only be wanted by English/German/English translators, but the English basis on its own will be attractive to other language orientations involving English" Juan C. Sager (UMIST, Manchester)

An extraordinary and rare insight into how a few determined entrepreneurs created an icon... - C. K. Prahalad
The targets were stupendous and considered unachievable by almost everyone. Slightly over two years to find a suitable partner, finalize all legal documentation, get governmental approval to these agreements as well as to the investment proposals, build a factory, develop a supplier base to meet localization regulations, create a sales and service network, and develop and launch a peoples car that would sell 100,000 a year, in a sector where Indian expertise was limited. And to do this as a public sector company, having to follow all governmental systems and procedures, and having to please both its masters in the government and Suzuki Motor Corporation. However, the Maruti project succeeded, and in ways that were unimaginable in 1983. The car revolutionized the industry and put a country on wheels. Suddenly, ordinary middle-class men and women could aspire to own a reliable, economical and modern car, and the steep sales targets were easily met. Twenty-six years later, the company, now free of government controls and facing competition from the worlds major manufacturers who have entered the Indian market, still leads the way. Not only that, cars made by Maruti can be seen in all continents. By any yardstick, it is an incredible story, involving grit, management skill and entrepreneurship of a high order. R.C. Bhargava, who was at the helm of the company, and is currently its chairman, co-writing with senior journalist and author Seetha, shows how it was done in this riveting account of a landmark achievement.
