Geographic Information Systems Geographic information system (GIS) technology can be used for scientific investigations, resource management, and development planning. For example, a GIS might allow emergency planners to easily calculate emergency response times in the event of a natural disaster, or a GIS might be used to find wetlands that need protection from pollution.

Geographic information science or geographical information science is the scientific discipline that studies the techniques to capture, represent, process, and analyze geographic information. It can be contrasted with geographic information systems, which are software tools. British geographer Michael Goodchild defined this area in the 1990s and summarized its core interests, including spatial analysis, visualization, and the representation of uncertainty. GIScience is conceptually related to ge
