Managing Innovation: New Technology, New Products, and New Services in a Global Economy, 2nd Edition is devoted to providing a better understanding and better management of all of the causes and consequences of change that have technological implications in and around our global organizations. This text is a unique, original contribution and represents a significant alternative to the collection of chapters written by others. The second edition has new cases with a few classics from the first edition that have been retained in response to reader feedback. The key subjects that are included have been significantly updated and treated in greater depth. The number of chapters has been reduced from 12 to 10 so it is easy to adapt to almost any course or training on the subject in any discipline or to any audience. This exceptionally informative book provides a broad perspective on how technological change can be effectively managed in modern organizations. The text explains the conceptual frameworks supported by new and original case studies for start-up companies like Askmen.com, the complex challenges of managing international technology-based companies like NexPress (a joint venture of Kodak and Heidelberg) in the digital printing industry, and corporate sustainability using innovative new product technologies illustrated by the case of Evinrude's launch of the E-tec® outboard motor. John E. Ettlie's three decades in the field of innovation as an instructor and researcher bring an exceptional perspective to this subject. His text is unique in its discussion of how technology has transformed the service sector. Few books on technology make the distinction between new offerings in manufacturing and the service sector which is emphasized in this text.

Students of management are nearly unanimous (as are managers themselves) in believing that the contemporary business corporation is in a period of dizzying change. This book represents the first time that leading experts in sociology, law, economics, and management studies have been assembled in one volume to explain the varying ways in which contemporary businesses are transforming themselves to respond to globalization, new technologies, workforce transformation, and legal change. Together their essays, whose focal point is an emerging network form of organization, bring order to the chaotic tumble of diagnoses, labels, and descriptions used to make sense of this changing world. Following an introduction by the editor, the first three chapters--by Walter Powell, David Stark, and Eleanor Westney--report systematically on change in corporate structure, strategy, and governance in the United States and Western Europe, East Asia, and the former socialist world. They separate fact from fiction and established trend from extravagant extrapolation. This is followed by commentary on them: Reinier Kraakman affirms the durability of the corporate form; David Bryce and Jitendra Singh assess organizational change from an evolutionary perspective; Robert Gibbons considers the logic of relational contracting in firms; and Charles Tilly probes the deeper historical context in which firms operate. The result is a revealing portrait of the challenges that managers face at the dawn of the twenty-first century and of how the diverse responses to those challenges are changing the nature of business enterprise throughout the world.

The study of investment under uncertainty was stagnant for several decades until developments in real options revitalized the field. The topics covered in this book include the reasons behind the under-investment programme.
