Psychology #2 Low Power Methodology Manual

The " Low Power Methodology Manual" (LPMM) is a comprehensive and practical guide to managing power in system-on-chip designs, critical to designers using 90-nanometer and below technology. The authors, all low power experts, are led by Michael Keating, Synopsys Fellow and principal author of the widely adopted Reuse Methodology Manual for System-on-Chip Design, and David Flynn, ARM R&D Fellow and original architect behind ARM's synthesizable CPU family and the AMBA® on-chip interconnect ...

Low Power Methodology Manual - Synopsys

About this book. "Tools alone aren't enough to reduce dynamic and leakage power in complex chip designs - a well-planned methodology is needed. Following in the footsteps of the successful Reuse Methodology Manual (RMM), authors from ARM and Synopsys have written this Low Power Methodology Manual (LPMM) to describe [such] [a] low-power methodology with a practical, step-by-step approach."

Leveraging years of collective industry best practices, the Verification Methodology Manual for Low Power (VMM-LP) introduces a new verification methodology for low power and provides a blueprint for successful verification of low power designs. It describes the common causes of low power design failures, the impact of low power on the specification of power intent, the implementation of test plans, the setup of testbenches and the metrics of verification using assertions and coverage.
